First, I must say this is a beautiful icon set. I like to see these types of icon sets, which are not overpowered. My concern, or issue at hand, is that this The Bible Icons Icon Set is not working in Iconpackager. It shows that the icon cannot be found. I have now tried this Icon Set on the then-current IconPackager 0.6.1 build (without patch). There is a "Dark" and "Alternate" folder in IconPackager's icon folder. I replaced all the icons in these folders with the icons from the The Bible Icons Icon Set. If I first open IconPackager in the "Dark" folder, then open the same IconPackager in the "Alternate" folder, I get the error: "The Bible Icons icon is not

available. It is currently being rendered as a black silhouette." Trying to open IconPack 09e8f5149f

Looking for an "in-game" type of client. I work in the computer world so, I really dislike when they give the file size as a megabyte or something like that for my attachments. It really doesn't make much sense, would anyone want a file that big? I assume it is TLC that is referring. They would have been better off having something that wasn't so much like the recent IG versions and just spiffed up a bit with an eye for detail. The latest versions went way too far in the opposite direction for my taste and I don't doubt that designers had some very good reasons for their changes. I do hope you are close to finishing your design idea. As for attachments, the maximum size allowed is 2MB. You're right, but it
