What's New in the AeonWave Audio-FX?

AeonWave Audio-FX is an effect program that takes advantage of two different sample rate conversions: DSP rate (sample-rate doubling or halving) and downconversion (sample rate from DSP rate to "native" sample rate). As the DSP rate is converted to the same rate as the native sample rate, all DSP-based effects can be applied. The application also features several other options for its effects. These are detailed in the instruction manual. Sample rate conversion is a two-step process: 1. Pre-Conversion: All sound is recorded at sample rate $1/f_s$. This is a "snapshot" that represents all the sound recorded at sample rate $1/f_s$. 2. Conversion: All sound is converted from sample rate $1/f_s$ to sample rate $1/2f_s$ or $1/4f_s$, using algorithms that are unique to AeonWave Audio-FX. The conversion algorithm is based on an adaptive windowing process. The window that is used will dynamically adapt to the input signal. As a result, the application compensates for dynamic-range limitations, distortion (both in- and out-of-phase with the input signal) and aliasing (in the frequency domain). The application is provided as a DLL (Data-Link Library) that runs in response to a DSP interrupt. As a result, sample-rate conversions occur in real-time. AeonWave Audio-FX is a professional Audio Effects Tool for the following areas: 1. Audio production: Every sound or instrument can be re-recorded using different sample-rate conversions. This can be used to record and convert to sample-rate, creating a lower-sample-rate version of the original sound, or to convert from sample-rate and make a higher-sample-rate version of the original sound. 2. Audio processing and file conversion: AeonWave Audio-FX can be used to process your existing audio files (such as cutting, dynamic-range compression, EQ, and reverse-conversion) or to convert audio files from one sample-rate to another sample-rate. AeonWave Audio-FX features dedicated in-depth menus for better interaction with each user. The application has two main "levels": - A general options level, where sound processing functions are available, as well as controls for working with sounds. - A separate audio effects sub-level, where effects are available for use with sounds. The application is very easy to use. You can add sounds and effects from a digital sound source or import sounds from a CD. After that, you can apply effects to the sounds in real-time (sample-rate conversion). AeonWave Audio-FX can be used in two different ways: - In a dedicated mixer mode, where AeonWave Audio-FX is used to adjust sounds, while the mixer is used
