In this thesis I compare how the Star Wars prequels portrayed the First Order and their tactics. My hypothesis is that first order members and tactics were introduced more gradually in the prequels, while The Force Awakens introduces more very sparsely. To test the hypothesis it is necessary to identify members of the First Order, and tactics used. First I annotate the films of the prequels to identify the members of the First Order and the tactics they utilise. In the sequel trilogy, the leader of the First Order is Kylo Ren, who uses many First Order tactics. Furthermore, the First Order has two distinct members, those on D'vadar and Supreme Leader Snoke respectively, while any given member of the First Order can be described by four new behavioural traits. Using this information I return to the prequels and attempt to predict which individuals are likely to fit in with the First Order and the tactics used. In the process I am exposed to just how little on-screen First Order activity there is in the prequels, and this lends an air of uncertainty in the aim of this thesis. By demonstrating that the First Order leaders are not particularly important, and by providing plausible motives for why they are there, I hope to obviate this. Further, by looking at the available character data, and differentiating between the characters, I expect to predict who the best First Order leaders may be in the films. Due to time constraints, I fail to make any summary predictions, and the information below is purely a means of employment.Confession of the Overloaded I talked to my mother today while shopping with her at Target. And I was reminded of how well I am with people these days when I told her that I sometimes talk to my mom in email. And I'd tell her that sometimes I text her. And I told her that my

You are the Red Starfighter and you will hunt and destroy the rogue spacecrafts. Starprey uses a futuristic hardware to track and destroy spacecrafts. It uses stepper motor control along with gyroscopes to create a space-like environment. There are still some bugs in the final release, they are being ironed out as we speak. Please report any bugs you find. Also, the game still uses.ogg audio and I am still figuring out how to clean up the sound. The new and improved version of the game. This version of Starprey has a faster frame rate, it also has a new art design and over 100 more levels. As of now, it has 2 bosses. Please go to the main menu and choose the "New Game" option. -Reggie The Weasel Starprey is a game that has been a labour of love for about a year now. It consists of quite a lot of levels/areas with a total of 50 levels. There are also 2 "boss battles", but the one in the main menu is still the only one playable. I want to release this one so I can start working on the next game. As you can see, there are several problems on the second one. Even though it's the second one, the first one had been worked on for a good amount of time. Additionally, I have changed the way the game is played a bit, so it's probably going to be really hard for anyone to see the plot. There are also quite a lot of new additions on this version, which is a bit longer than the first one. In the main menu, there is now a "continue" option that plays the new "First Area". There is now a "Creator Mode" as well, where you can create your own levels and save them on a SD card. There is also another (different) map, a white and black level that leads you to a secret exit. Additionally, I have also added a "Hard mode" and some other stuff. It's not finished yet, but I think I have enough content for the first version. -Reggie The Weasel Last edited by Reggie The Weasel; 25th July 2009 at 05:35 PM. Reason: O RLY? Brothers in Arms is a World War II tactics game in which the player must lead a series of armoured vehicles through historical battlefields in pursuit of the ultimate objective. The game utilises full 3D terrain and movement, with a campaign mode over 11 single-player scenarios as well as three 'Blackjack' multiplayer modes in which one player controls all the vehicles, with the other two drivers providing support by providing supplies and communication. The campaign mode has 64 missions, with a variety of different objectives and types of terrain, ranging from the German forests of the Eastern Front to the open field of North Africa and even the streets of the French capital. The game also includes 'Blackjack' multiplayer modes, three for each type of vehicle. Players can choose to play on various kinds of maps, with 15 types of landscapes, ranging from beaches to water surfaces to mountain terrain. The game offers three control modes, allowing the use of mouse and keyboard, an analogue gamepad or the Xbox 360 controller. The game is made up of three sections: the base game, Blackjack and the campaign. In the base game, players can buy a variety of different vehicles, such as the Panzer II, Panzer III, Stuart tank, or the Dutch Ondelmans OP tank, or choose to start the game with a random selection of vehicles and outfits, allowing players to have a unique vehicle for the duration of the game. Players can also buy vehicles, both new and old, to form a collection of historically accurate vehicles. The Blackjack multiplayer mode is a team game which combines turn-based gameplay with the ability to move over realistic battlefields. Players have the ability to strategize tactics

Each document that follows is licensed under the GPL. You can find my current documents at Introduction I started this project a couple of years ago. It was originally named doX, a deliberately cryptic moniker that refers to Dox, the kernel written by Andy Tanenbaum for MVS/370. In this case, D stands for "domain", which refers to what I assume would be a set of physical devices (/dev/sda, /dev/st0,...). It occurred to me that I was possibly overthinking this project a little bit. I'd spent days--even weeks--thinking about it before really getting anything done. I was looking to reinvent the wheel but quite honestly I didn't want to do it. But, I couldn't shake a feeling that if I did reinvent the wheel, I'd have to come up with some new metaphors. So, I narrowed my studies to the dilemma, "What is the nature of information?" It turns out that the answer is mathematics. I started a journey of reading books on mathematics. I found the field of function theory fascinating. I found it similar to what I was trying to create: information. If information was a black box (the null machine), then function theory would be the physical representation of binary information. You have bits, then you can perform binary operations on them. You have NAND gates, so now you can perform binary addition operations. You have Boolean algebra, mechanical processes, and relationship matrices. You can write programs in all of these formalisms. All these formalisms only describe the behavior of the black box. They don't take into account the intelligence of the machine that performs the behavior. They also have a political import: if you program in one of these formalisms, you are not left alone to understand
