The impact of weak mixing on molecular water/electrolyte association. This paper provides a molecular/microscopic explanation of the observed weak-mixing behavior of water/salt solutions (in particular, ionic strength effects on the stability of the water/salt hydrogen-bonded networks). We show that when the guest molecule rotates much faster than the solvent molecules, (i) the first-shell water molecules are energetically favorable to the electrolyte ions because of the relaxed coherence of the solvent's fast rotation and (ii) the water molecules can migrate to the electrolyte ions' second coordination shell. This, in turn, reduces the overall attraction between the water molecules and the

electrolyte ions. A simple model is used to illustrate these ideas. This application is a continuation of U.S. patent application Ser. No. 13/917,101, filed on Aug. 23, 2013, which is a continuation of U.S. patent application Ser. No. 13/292,782, filed on Dec. 13, 2011, which is a continuation of U.S. patent application Ser. free download The Book of the Law of
Thought is a e-book of 92 pages. It can be
read on-line or downloaded. For free, no
registration is required.. 73% of 776
readers have downloaded a copy of the
Book of the Law of Thought. Portable
electronic devices such as mobile phones,
PDA, IPHONES, laptop computers and
notebooks, among others, have achieved
ever increasing processing, storage and
mobility in response to consumer demand.
One major problem facing these devices is
their susceptibility to damage caused by
the dropping of the device onto a hard
surface. There has been a major market for
protective cases and casters that help in

the prevention of devices from damaging their surfaces when dropped. The casters are particularly advantageous to avoid or reduce damage to the device's screen and the components that are inside the device.

Many casters employ a caster wheel coupled to a bottom of the device case.

The caster has a hub with a roller positioned inside the outer perimeter of the hub. The hub is rotatably coupled to a bottom of the device case and rotates around a bottom edge of the case. The rotation of the caster wheel is frictionally coupled with the bottom edge of the case to cause the device to roll around the bottom edge of the case. One type of a caster wheel is a magnetic caster that utilizes a magnet in the caster wheel to adhere the caster wheel to the device case. Magnetic casters are inexpensive and easy to manufacture but they only maintain adhesion to the device case when the device is stationary. When the device is

in use, the device may move from a stable position in the device case to an unstable position that may cause the magnetic caster to slip.Pont
