Compatibility Issues Supporting tablet PCs Windows 7 and newer Multiple-core CPUs AutoCAD LT 2016 lite If AutoCAD LT is installed on an incompatible operating system, it cannot be installed, reinstalled, or upgraded. If a workaround is required, AutoCAD LT can be installed on a different computer. Supporting tablets Note: AutoCAD LT does not support the installation of AutoCAD LT 2016 on Surface Pro 3, Surface Book, or Surface Studio. Supporting multiple-core CPUs Note: AutoCAD LT 2016 can be installed on a computer running Windows 8.1 or later. An error will appear when installing the software if the OS has been previously upgraded to a later version. AutoCAD LT 2016 lite For more detailed instructions on compatibility issues, see PC Compatibility. You will need the following minimum PC requirements to install AutoCAD LT 2016. However, you may be able to successfully install AutoCAD LT 2016 on a system with fewer resources than the minimum. New features in AutoCAD LT 2016 lite AutoCAD LT 2016 lite is designed to offer a cost-effective approach to 2D CAD. AutoCAD LT 2016 lite supports a single-user license, so there is no need to install the software on multiple computers. AutoCAD LT 2016 lite installs on Windows XP and Windows Vista and supports both 32- and 64-bit operating systems. Multi-core CPUs AutoCAD LT 2016 lite does not support multi-core CPUs. While you will not see performance gains, you will avoid performance hits and memory consumption. Supported Operating Systems and CPU architecture AutoCAD LT 2016 lite supports the following operating systems and CPU architectures: Operating system Architecture 32-bit Windows Vista 32-bit Windows 7 64-bit Windows 8.1 64-bit Windows 10 32-bit Intel/AMD Architecture Note: AutoCAD LT 2016 lite is not supported on computers running operating systems prior to Windows XP SP2 or Windows Vista SP1. You will need the following minimum PC requirements to install AutoCAD LT 2016. However, you may be able to successfully

Computer-Aided Design (CAD) - The two main types of CAD software are feature-based CAD and parametric CAD. Feature-based CAD is the CAD design approach in which a user creates drawings on a plotter or on a computer by using the familiar features of a drafting system. Parametric CAD is the CAD design approach in which a user creates drawings by directly defining and manipulating the geometric features of a drawing. Parametric CAD programs represent entities as a model, which is composed of geometric components. It uses these geometric components as building blocks to make up the final product. Computer-aided manufacturing (CAM) is the process of modifying computer-aided design (CAD) data using automated software tools to enable the manufacture of complex parts from either metal, wood, plastic or composite material. Computer-aided engineering (CAE) is the design and analysis of a product or process which can be described by a computer model. CAE software is used for a variety of purposes, including design, analysis and simulation. Its use is increasing in mechanical engineering and design due to the advantage of being able to process large models and perform analysis, rather than on physical prototype. The increasing use of CAE has led to the emergence of specialised CAE software, including tools for plastics design and material analysis. There are also CAE software tools for the analysis and simulation of solar, wind, and wave energy systems. Q: What's wrong with my hibernate query? Hey I'm having trouble with this query. I get this: No resultset returned when executing a query org.hibernate.exception.NoResultException: resultset returned null for criteria: The query I have is: String sql = "SELECT t1.Id, t1.Name, t1.Description, t2.Description FROM TTable t1, TTable t2 WHERE t1.Id=t2.ParentId AND t1.Type=3"; A: A query with HQL requires the table name (not just the ID) in a FROM clause. So, change: String sql = "SELECT t1.Id, t1.Name, t1.Description, t2.Description FROM TTable t1, TTable t2 WHERE t1.Id=t2.ParentId AND t1.Type=3"; to: String sql = "SELECT t1.Id, t1.Name, t1.Description, t2.Description FROM TTable t1, TTable t2 WHERE t1.Id=t2.ParentId AND t1.Type=3";
