Automatically add 2D annotations to your 3D drawings. Import annotations from PowerPoint presentations and other 2D sources, and automatically add them to your 3D model as 2D annotations. (video: 0:50 min.) Improve your data management with merge and split operations. Import and split your existing data and efficiently create a new dataset. Merge data between multiple drawings. (video: 0:32 min.) Improve your data management with styles. Create, apply, and reuse styles that automatically apply to newly imported data. Reuse styles from previous AutoCAD editions as you import data. (video: 0:49 min.) Use the best-fitting object in AutoCAD to fix other objects. Apply a best-fitting object to the rest of the drawing. Move or rotate the best-fitting object as needed, to fit other objects into the drawing. (video: 1:04 min.) Automatically manage selected entities with selected entity helpers. Inject the entity you're working with into its related entities. For example, insert a sweep line into the entities that define the shape of the line. (video: 0:51 min.) Save paper and save time by importing vector and 3D content directly into your drawings. Exporting your drawing to DWG or DXF format lets you send the file to a printer or export to another 3D CAD program. (video: 1:00 min.) Reposition existing entities in the current drawing with mouse and keyboard shortcuts. Quickly relocate entities, selection handles, and other objects in your drawing. (video: 0:43 min.)
