## Age Of Empires II - Complete Package (With Addons Patches) Cheats 2021

new system: the old corruption system was a little bit too easy to abuse, allowing players to form empires to commit genocide. to make things more difficult, it could take ages for a city to get corrupted back to zero. so to make it easier, age of empires ii needed a new system. the new system was designed to make the game both more challenging and more realistic. the penalty system used the corruption of cities as a means of balancing the game, so that older cities wouldn't be able to hold out against massive armies forever. the basic idea was to make it so that civilization-level cities would never be able to hold out against gigantic armies, and that the only way to win was to be able to send massive amounts of troops to wipe out a city in one fell swoop. cities would become unusable very quickly if not built up, and units would become unusable very quickly if not sent out. old system: huge empires were the absolute best strategy. cities guard cities were small, but you could form empires far away from the capital without penalty. in the ancient era, cities would never be completely corrupted, which meant that it wasn't possible to build a very large empire to attack anything. new system: this is the new, harder system. the small cities that you build guard cities are now to small, and it takes ages for them to become corrupted. to make things harder, it's impossible for you to build cities very close together. a city guard won't even have time to build a city that is close to its own before it becomes corrupted.
