If you've read our first impressions of Photoshop CC, you know that you can now do all kinds of fun and useful things with the newest version of Photoshop. With a new layer and adjustment engine, you can now create, share, and even save videos from within the application. There are also new powerful tools for working with RAW files and seeing all the details of a photo. If you're like me, you're probably just using Photoshop to edit photographs, but there's also a group of new features in Photoshop that'll make your workflow much easier.

The Lens Flare tool allows you to change where you view images: at the center of the picture, somewhere in the periphery, or away from the picture. This is a welcome feature, since I have often wanted to hide portraits from my main collections of photos. We can zoom in further on these images with a single click, making some very tight and detailed images even more approachable. Providing yet another upgrade for Photoshop in 2012, Adobe has introduced Photoshop CS5, which is also the first major upgrade in 12 years. But how does it compare to the original? Like, better. The updates that made the "shelf and bag" tool in CS4 so useful, for example, are still in there, but more useful. The new "wrap" option in the layer ordering window lets you rearrange your layers and still see them on the same canvas; in the hard-to-find toolbox, you can use the radial pad to scale and flip a rectangular selection, and with a single click of a mouse, you can even seamlessly remove and replace layers as you work. However, I cannot say the same thing of Photoshop. If I were asked in a poll what is the most important feature to me, I would say, "RAM". The older version just slowed down fast when working with big documents. With Lightroom 6, 15-20 GB documents are no problem. Certainly when processing RAW images, I am more likely to speed up when I'm using RAM and swap files. Note that Adobe has made real progress in this area for Photoshop CS6. As a Lightroom 6 reference, I made a small comparison between Lightroom 5 and Lightroom 6, and the differences are noticeable. Photoshop CS6 is noticeably faster. Note that I haven't run formal benchmarks, but I do know that Lightroom 6 runs faster than Lightroom 5. I haven't tried Lightroom 6's new catalog management features yet.
