Before processing images in digital form, your choice of which camera to use and where to shoot it is dictated by the type of photo you want to capture. Digital photography takes the form of digital still images or RAW files. The choice determines how much processing is involved in the photography and how much control you have over the final result. RAW files contain more details about the image to be processed. The RAW camera file type contains more than enough raw information to work with, making it exciting and inspiring for photographers who want to do their own processing. However, one major disadvantage is that you lose control over the image; image processing occurs in the computer rather than your camera. Hence the phrase, "you don't get to keep the film, but you do get to keep the print." Your camera is still a vital part of the image, but it's a camera that you point and shoot. The camera image is an artistic medium -- at least the best ones are. Like every other medium, it requires control and skill to make the finished product shine.
