Adobe Photoshop CC is the latest version of Creative Cloud, a paid application that offers professional level photo editing capabilities. With every update to this program, Adobe makes improvements to speed up the editing process, add new features, and improve basic functionality. The new Photoshop, available as a standalone download on October 4, at $1,545, will include all of the creative features users know and love from Photoshop, in addition to a new camera Raw (CRW) workflow and new Pro Features based on popular user feedback and Adobe Sensei AI technology. These new features include:

- • **Share for Review:** Extend your creative process with Share for Review, allowing users to compose pictures in the file itself and then instantly publish for others to comment on. This feature is available on all kinds of images and formats – including RAW files – and all in one click. And when you receive comments, you can review them on your mobile device or desktop and make adjustments before loaning or tagging.
- • **Web-based:** Go a step further, broaden your creative abilities and take your presentation online. Start a Photoshop presentation with templates for class announcements, presentations,

project updates and more in one click. Add comments on Facebook or Twitter for instant feedback, and save presentations for reuse in Photoshop, or simply export them to HTML for sharing on the web or in marketing materials.

- • **Selection improvements:** With standard selection tools, users can manually select large amounts of areas on an image – including text – all in one action.
- • **Camera Raw:** Make adjustments to produce high quality versions of different RAW files in quick and easy steps — i.e., change exposure and color, add a black and white or sepia tone and, for RAW files, use Adobe Camera Raw in one click for even better image processing. Use creative color adjustments, presets and the powerful new ACR Ligthroom tab to play with the look of your RAW files. Locate subjects in near-instant previews, with a tweak of the sliders to design the perfect look.
- • **Fluid handling:** The updated Photoshop camera app with smart lens profiles opens Face Detection tools and is available for all cameras. To optimize the process of peer review, Adobe has created an AI lab called Photoshop Sensei, powered by a deep learning model. Through the experience of machine learning and the power of Photoshop, Photoshop Sensei analyzes images and removes the bias that comes from a human perspective and can make quicker, smarter decisions on how best to improve an image.
