To be honest, I've managed to deal with this flaw for a long time because I carry a Windows laptop as well as my mobile Android devices. If I cannot fix Lightroom by itself in my workflow, I have a brilliant switcher and the external hard drive that serves as a central storage for all my data. I believe that's the reason why I have not had too many problems. Whether you suffer from the same problem or not, it's pretty obvious that managing data efficiently is one of the best ways to quickly become productive. But you need to use the software as a whole, not just the plugin as tools and applications to help you work more efficiently. Therefore, tools like Lightroom need to evolve well before they're tried and tested. Lightroom is a very versatile application and one of the best digital photo workflow programs I have ever used. I just wish it were a bit more robust with the new built-in RAW converter. What is your take? Do you use Lightroom or not? Are you a current user? If so, what do you think about the update? If you are using another photo editing program, are there any issues you notice when using the new application? Do you feel Lightroom 5 is comparable to the final version? One last thing before I get into the nitty-gritty of this new release. I opened up Lightroom 5 for review and I was not impressed. This piece of software is supposed to empower us to make unimaginable photo studio setup possible, but Adobe is not that generous. We need to realize that software is always getting better. All we can do is keep pushing forward. When you throw a bunch of hammer into a nail hole, you train your hand to live without nails. Similarly, if you apply too much pressure to a piece of software, you'll design an application that's not very useful. Adobe is known for this. You no longer need to apologize for hearing the phrase "what can Adobe do for you"? It happens every time – including Lightroom 5.

By selecting the option Live Sharpen/Blur while applying an adjustment layer, you can apply the same changes to subsequent layers. While this is a welcome addition, not all adjustments are treated the same way in every case. Corrective work, for example, makes changes in the pixels in the layer, while destructive work tends to make changes in the pixels of all over the layer. It's an important addition to live, do nothing, and pixel-based workflows.
